

COMPLETE LISTING OF CLAIMS
IN ASCENDING ORDER WITH STATUS INDICATOR

1 (Currently amended) In a method of hormone replacement therapy comprising administering an effective amount of a selective estrogen receptor modulator to a woman in need of such therapy in order to control and regulate estrogenic impact on specific tissues and organs, the improvement which comprises additionally administering an agent which exhibits progestogenic activity in the woman in an amount which is effective to modulate the bleeding side effects of the selective estrogen receptor modulator.

2(Original). The method of claim 1 wherein the selective estrogen receptor modulator is clomiphene.

3(Original). The method of claim 1 wherein the selective estrogen receptor modulator is a benzothiophene.

4(Previously presented). The method of claim 1 wherein the agent which exhibits progestogenic is an antiprogestin.

5(Original). The method of claim 4 wherein the antiprogestin is a progesterone receptor antagonist.

6(Original). The method of claim 5 wherein the selective estrogen receptor modulator is clomiphene.

7(Original). The method of claim 5 wherein the selective estrogen receptor modulator is a benzothiophene.

8(Original). The method of claim 4 wherein the amount of antiprogesterone is that sufficient to maintain the blood estrogen concentration in the range of about 25 to 125 pg/ml.

9(Original). The method of claim 8 wherein the amount of antiprogesterone is that sufficient to maintain the blood estrogen concentration in the range of about 60 to 90 pg/ml.

10(Previously amended). The method of claim 1 wherein the agent which exhibits progestogenic activity expresses both androgenic and progestogenic activity.

11(Previously presented). The method of claim 10 wherein the agent which exhibits progestogenic activity comprises the combination of an androgen and a progestin.

12(Previously amended). The method of claim 10 wherein the agent which exhibits progestogenic activity is a single material which expresses both activities.

13(Previously presented). The method of claim 12 wherein the agent which exhibits progestogenic activity is danazol or levonorgestrel.

14 – 20 (Cancelled)
